$$A_L = \frac{\sigma_+ - \sigma_-}{\sigma_+ + \sigma_-}$$

- Parity violation for W production!

- Features of W boson production probing parton distributions:

- **Direct sensitivity** to quark (u/d) / anti-quark (ubar/dbar) distributions
- **Large scale defined by W mass (~80GeV)**
- Simple final state of charged leptons: **No dependency on fragmentation functions**

- Polarized and unpolarized partonic cross-sections known at NLO / Resummation framework - **W  $A_L$  asymmetry results powerful input for global analyses** such as DSSV and NNPDF at NLO level!

# Summary / Outlook

## □ Summary

- Mid-rapidity (Run 11/12): Published  $W$  asymmetry results suggest large anti- $u$  quark polarization along with broken QCD sea.
- New prelim. result of STAR 2013  $W_{AL}$  is the most precise measurement to date. These results will help to further constrain anti-quark helicity distributions / Publication in preparation!
- New STAR 2013  $W_{AL}$  prelim. results consistent with published STAR 2011+2012 results and published PHENIX mid-rapidity results.
- Preliminary cross-section ratio measurement (Run 11/12): Strong physics case of unpolarized  $d\bar{b}$ / $u\bar{b}$  ratio using  $W$  production complementary to SeaQuest at FNAL / New Run 13 result in preparation!

## □ Outlook

- Long 510GeV run in 2017 (Run 17) at transverse spin polarization of about  $350\text{pb}^{-1}$ :  $W_{AN}$  / Unpol. QCD sea
- Unpolarized program for Run 17: Cross-section ratio measurements of  $W^+/W^-$  Unpolarized  $d\bar{b}$  /  $u\bar{b}$  probe
- Exciting long-term polarized  $pp/pA$  program beyond 2020 requiring forward detector upgrade (Cold QCD plan)
