e. ramirez-ruiz

# ejecta from compact object mergers

$$M_{\text{ej}} \sim 10^{-4} - 10^{-2} M_{\text{sun}}$$

dynamical ejecta

disk winds

$$t \sim \text{ms}$$

$$Y_e \sim 0.05 - 0.1$$

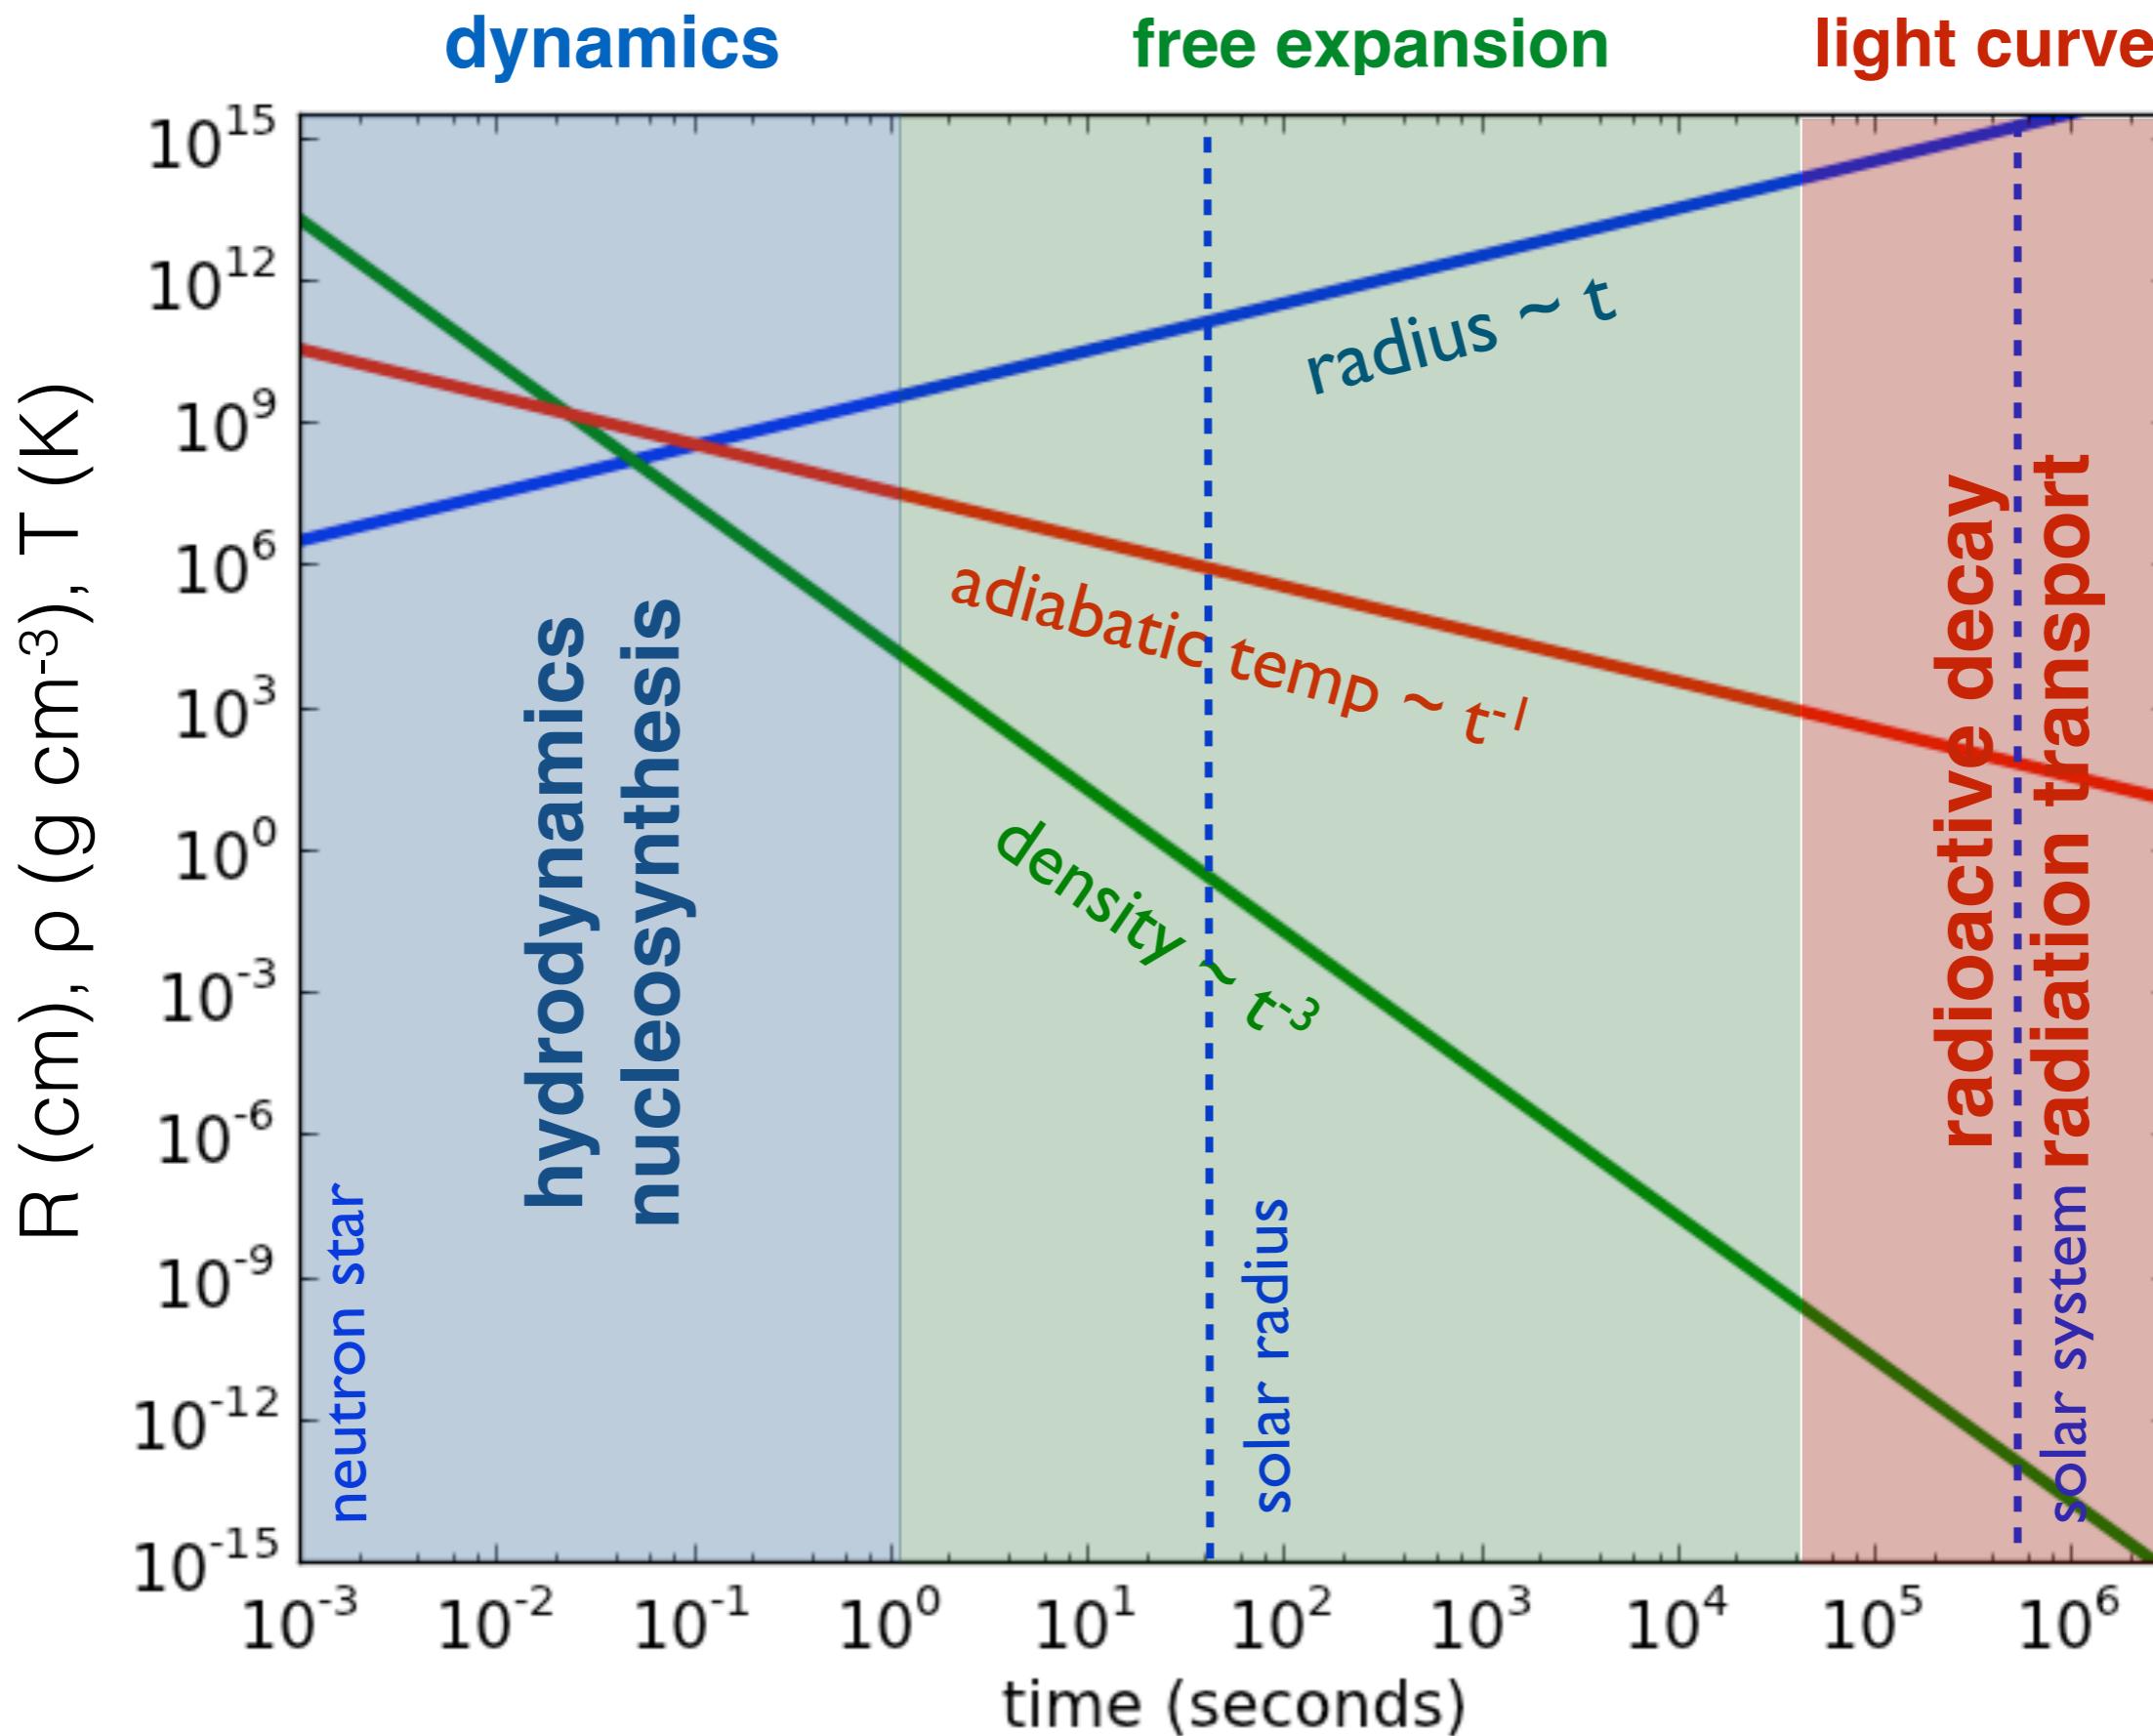

“strong” r-process  
( $A > 130$ )

$$t \sim \text{sec}$$

$$Y_e \sim 0.2 - 0.4$$

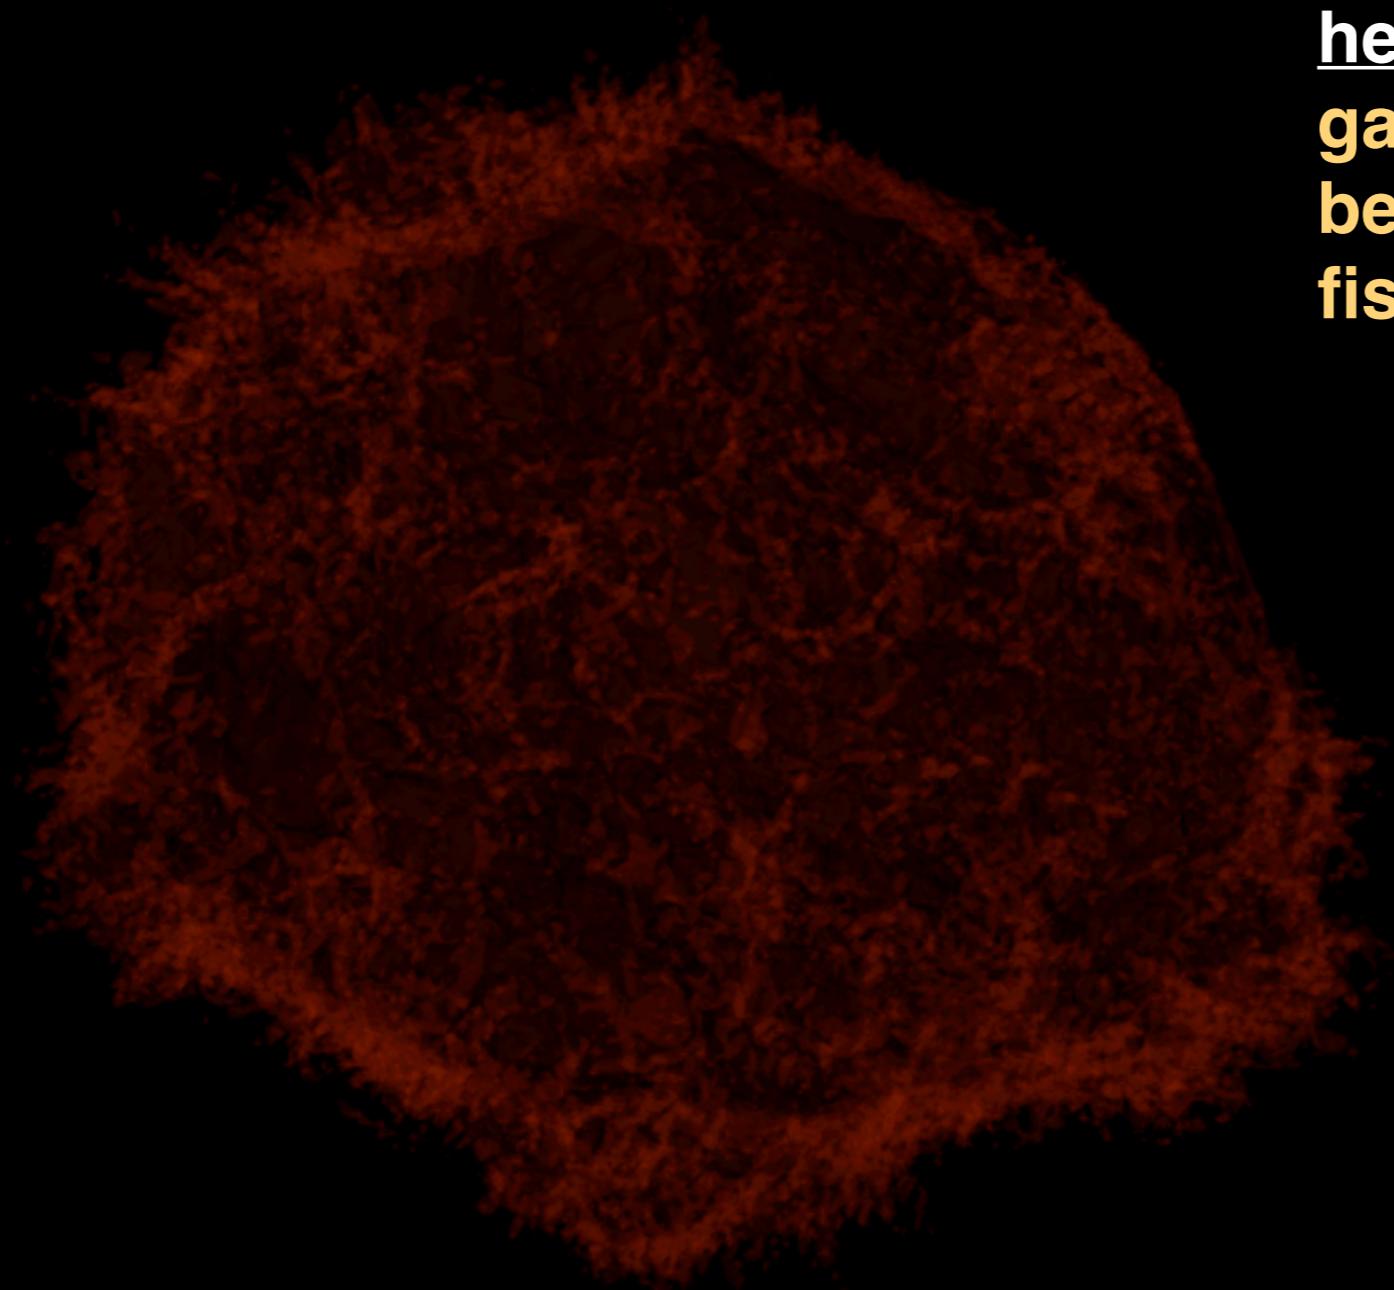

“strong” and/or “weak ( $A < 130$ )”  
depending on neutrino irradiation

# expansion of merger ejecta

# multi-D time dependent radiative transfer

SEDONA code - Kasen et al. *ApJ* (2006), Kasen (2008), Roth & Kasen (2014)

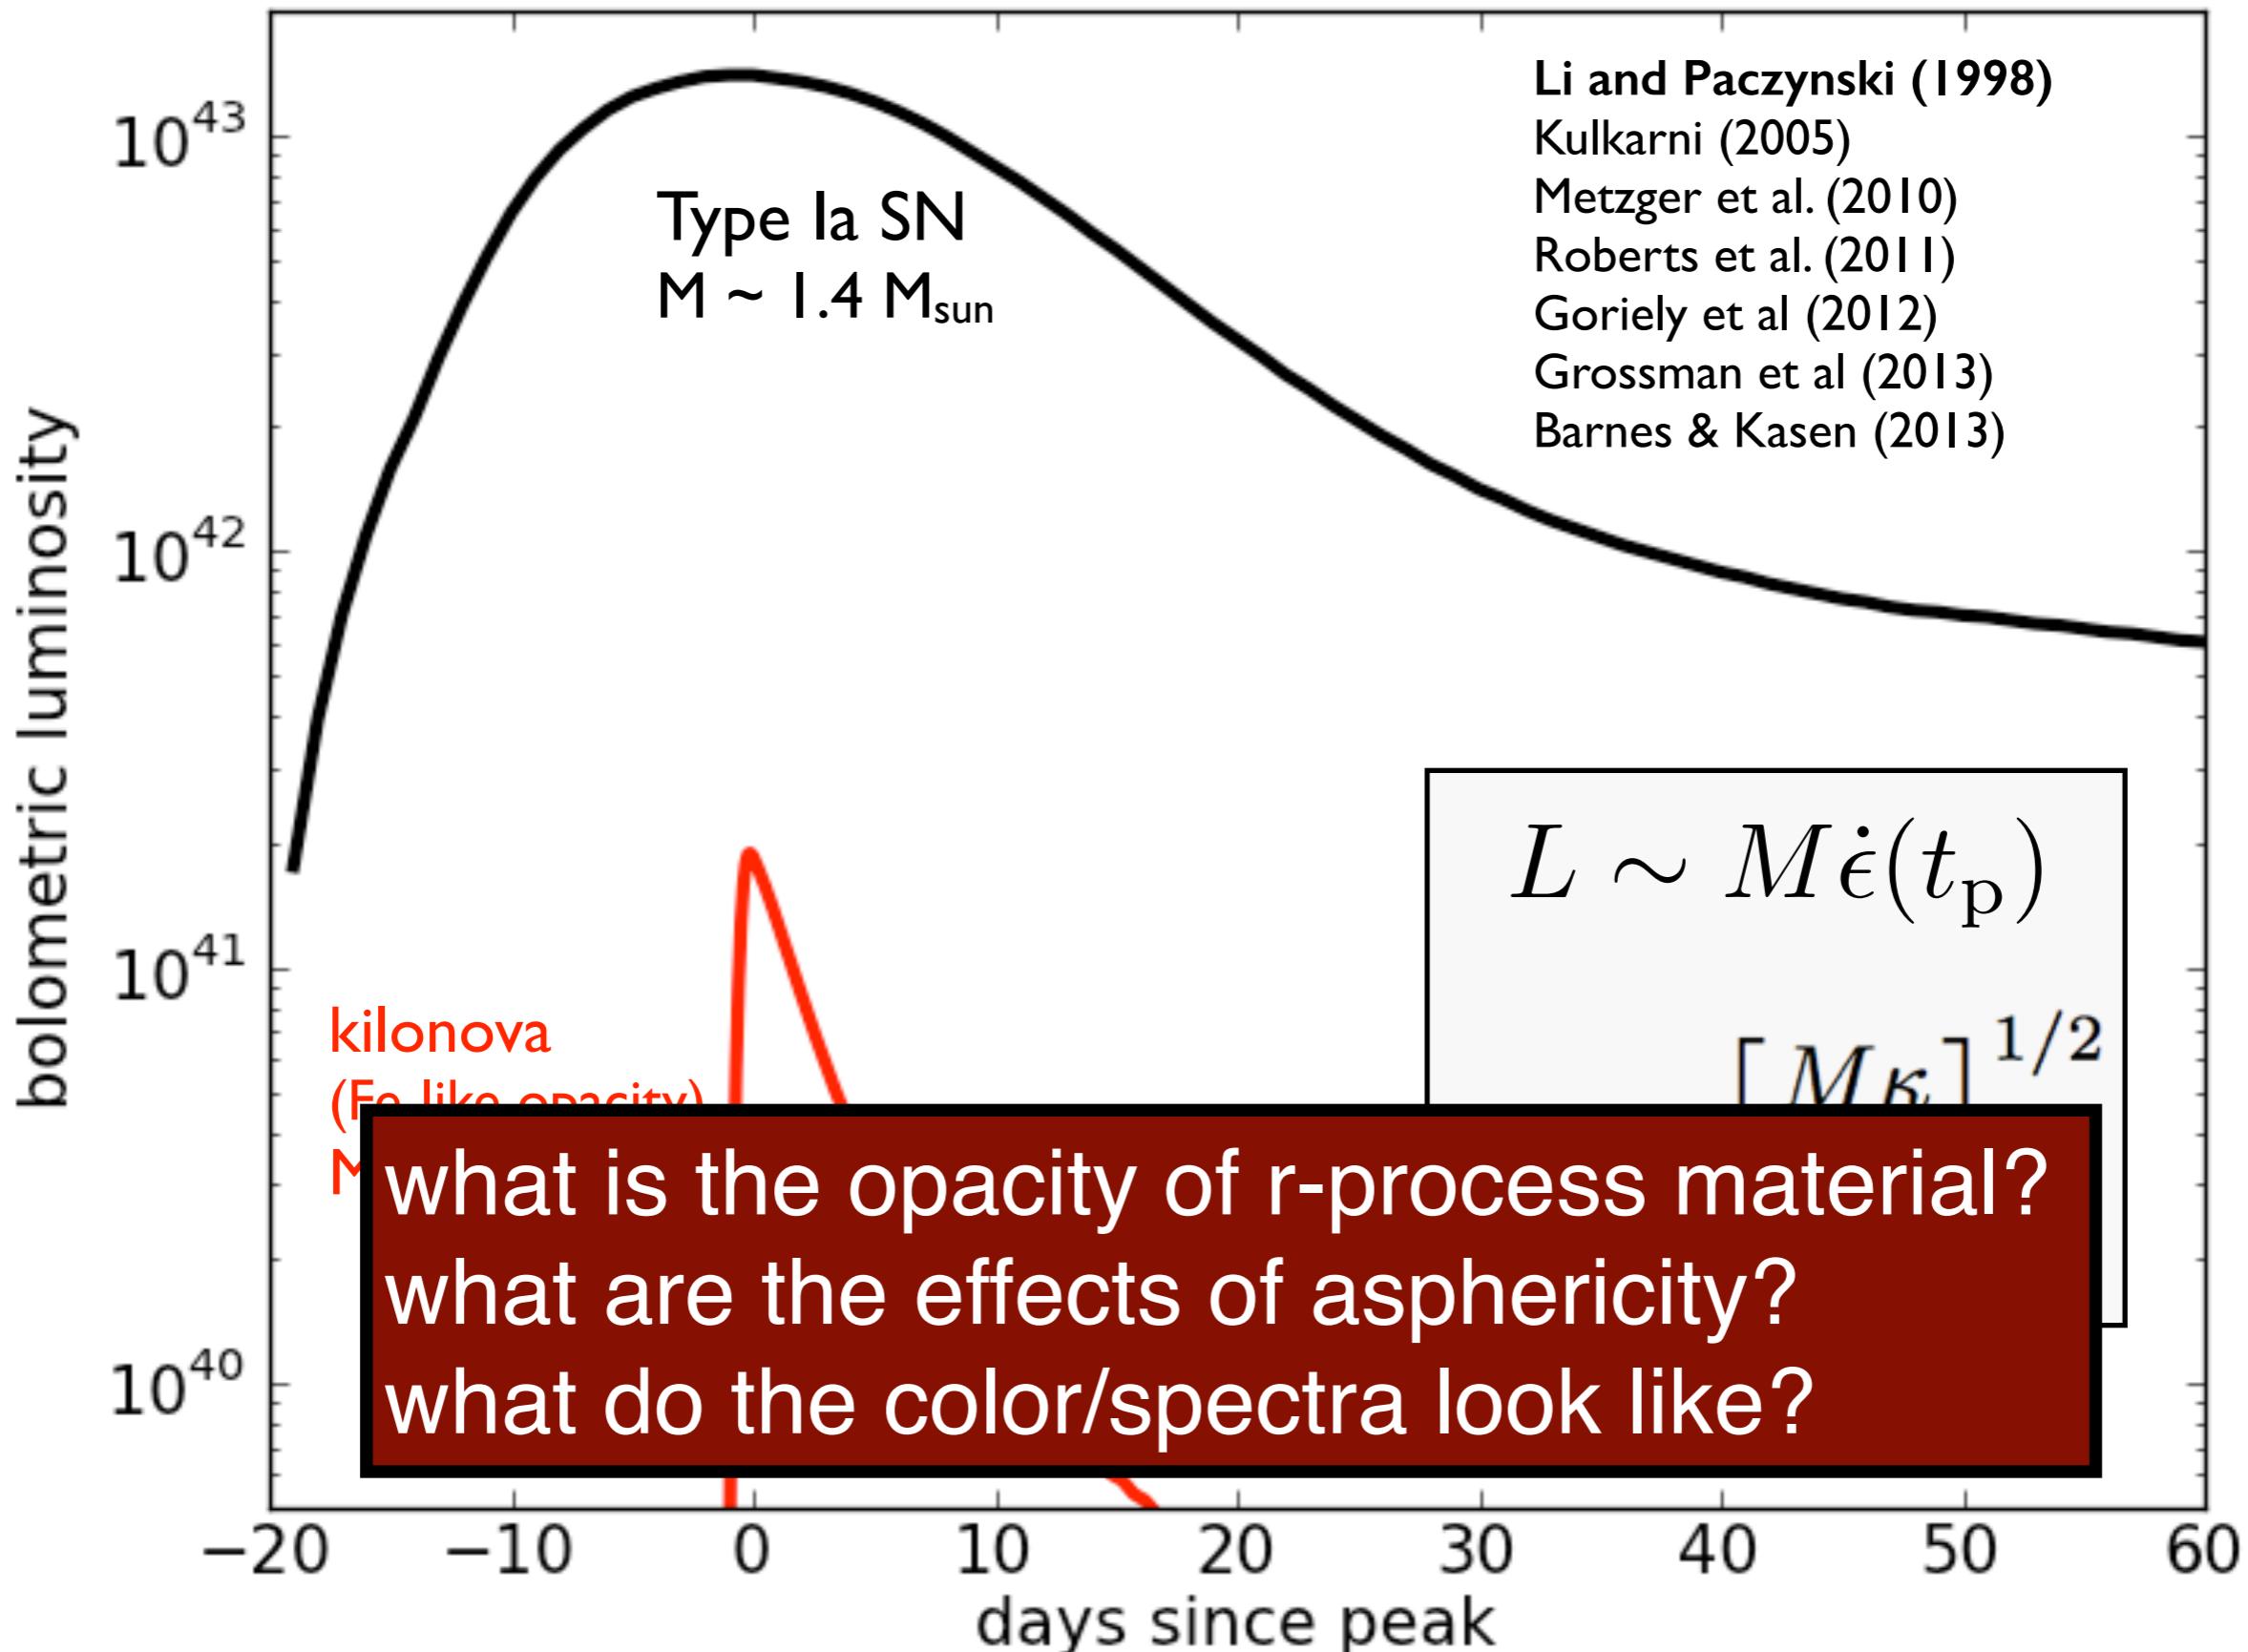

freely expanding cloud  
heated by radioactivity

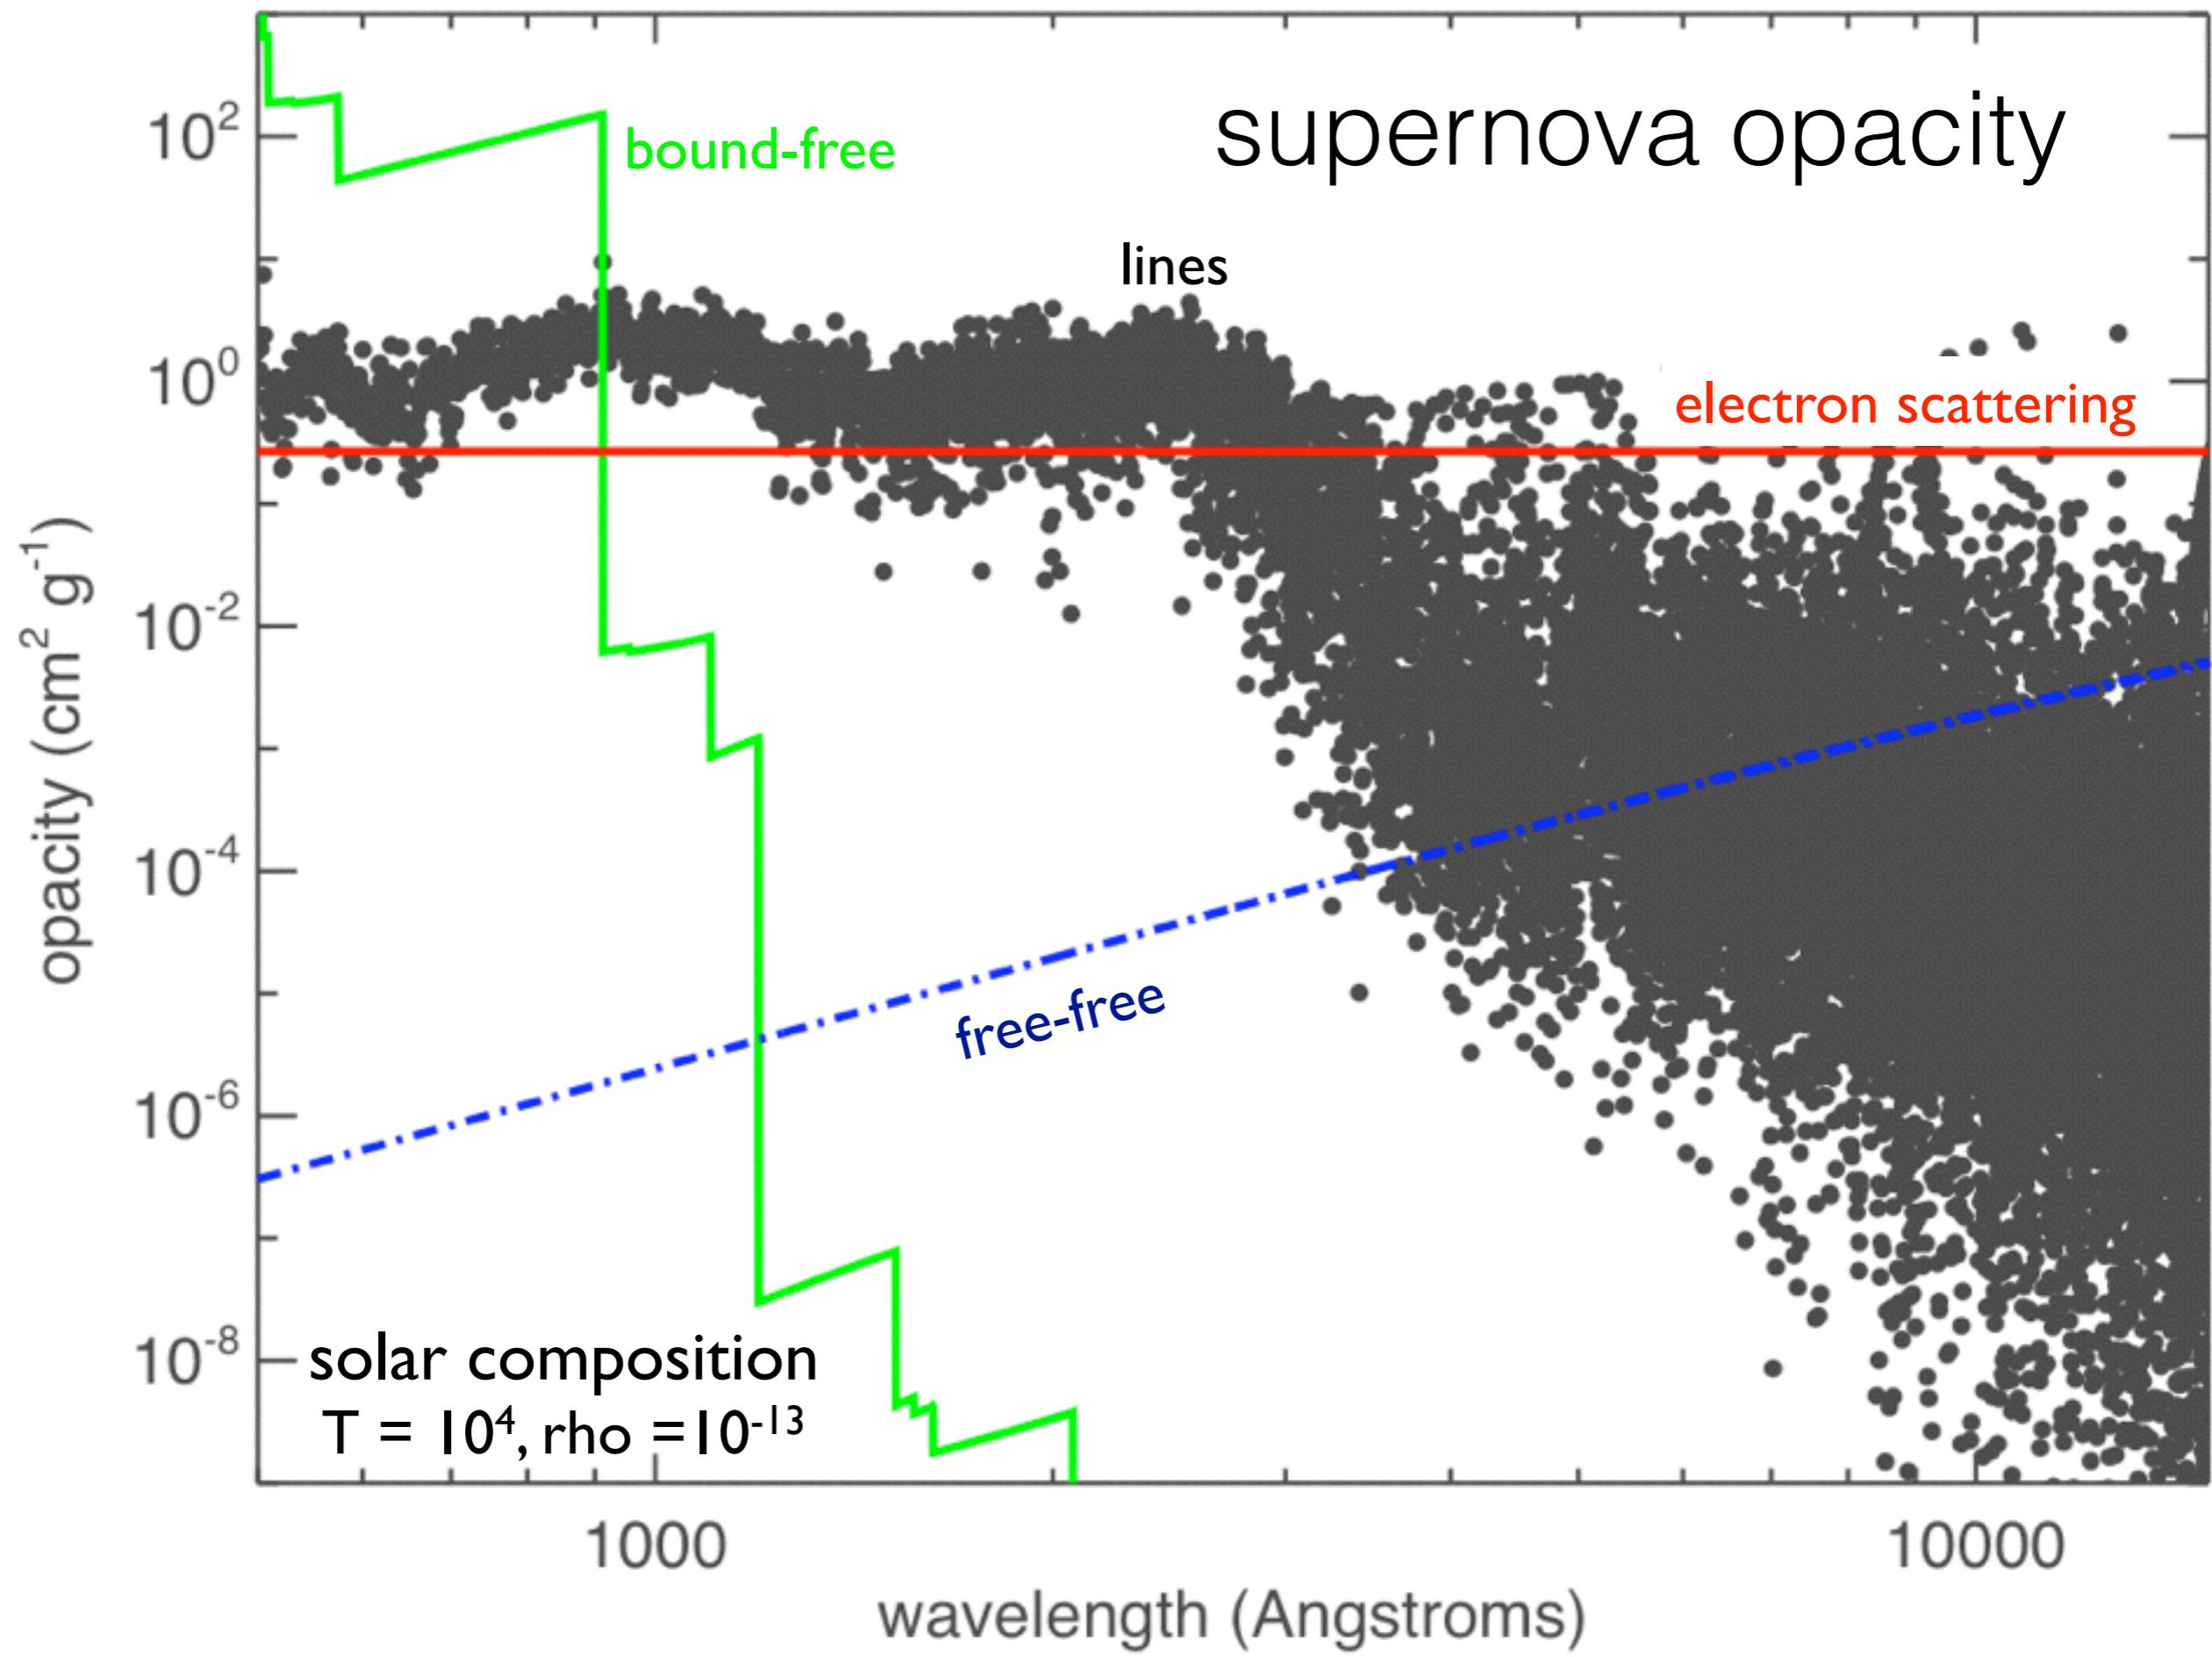

**gamma-rays:** compton/photoabsorption  
**betas:** coulomb collisions, ionization  
**fission, alphas:** coulomb collisions

re-emitted thermal  
optical/infrared photons  
gradually diffuse out

main opacity: **lines**  
must calculate  
thermodynamic evolution,  
ionization/exciation state  
with detailed atomic data

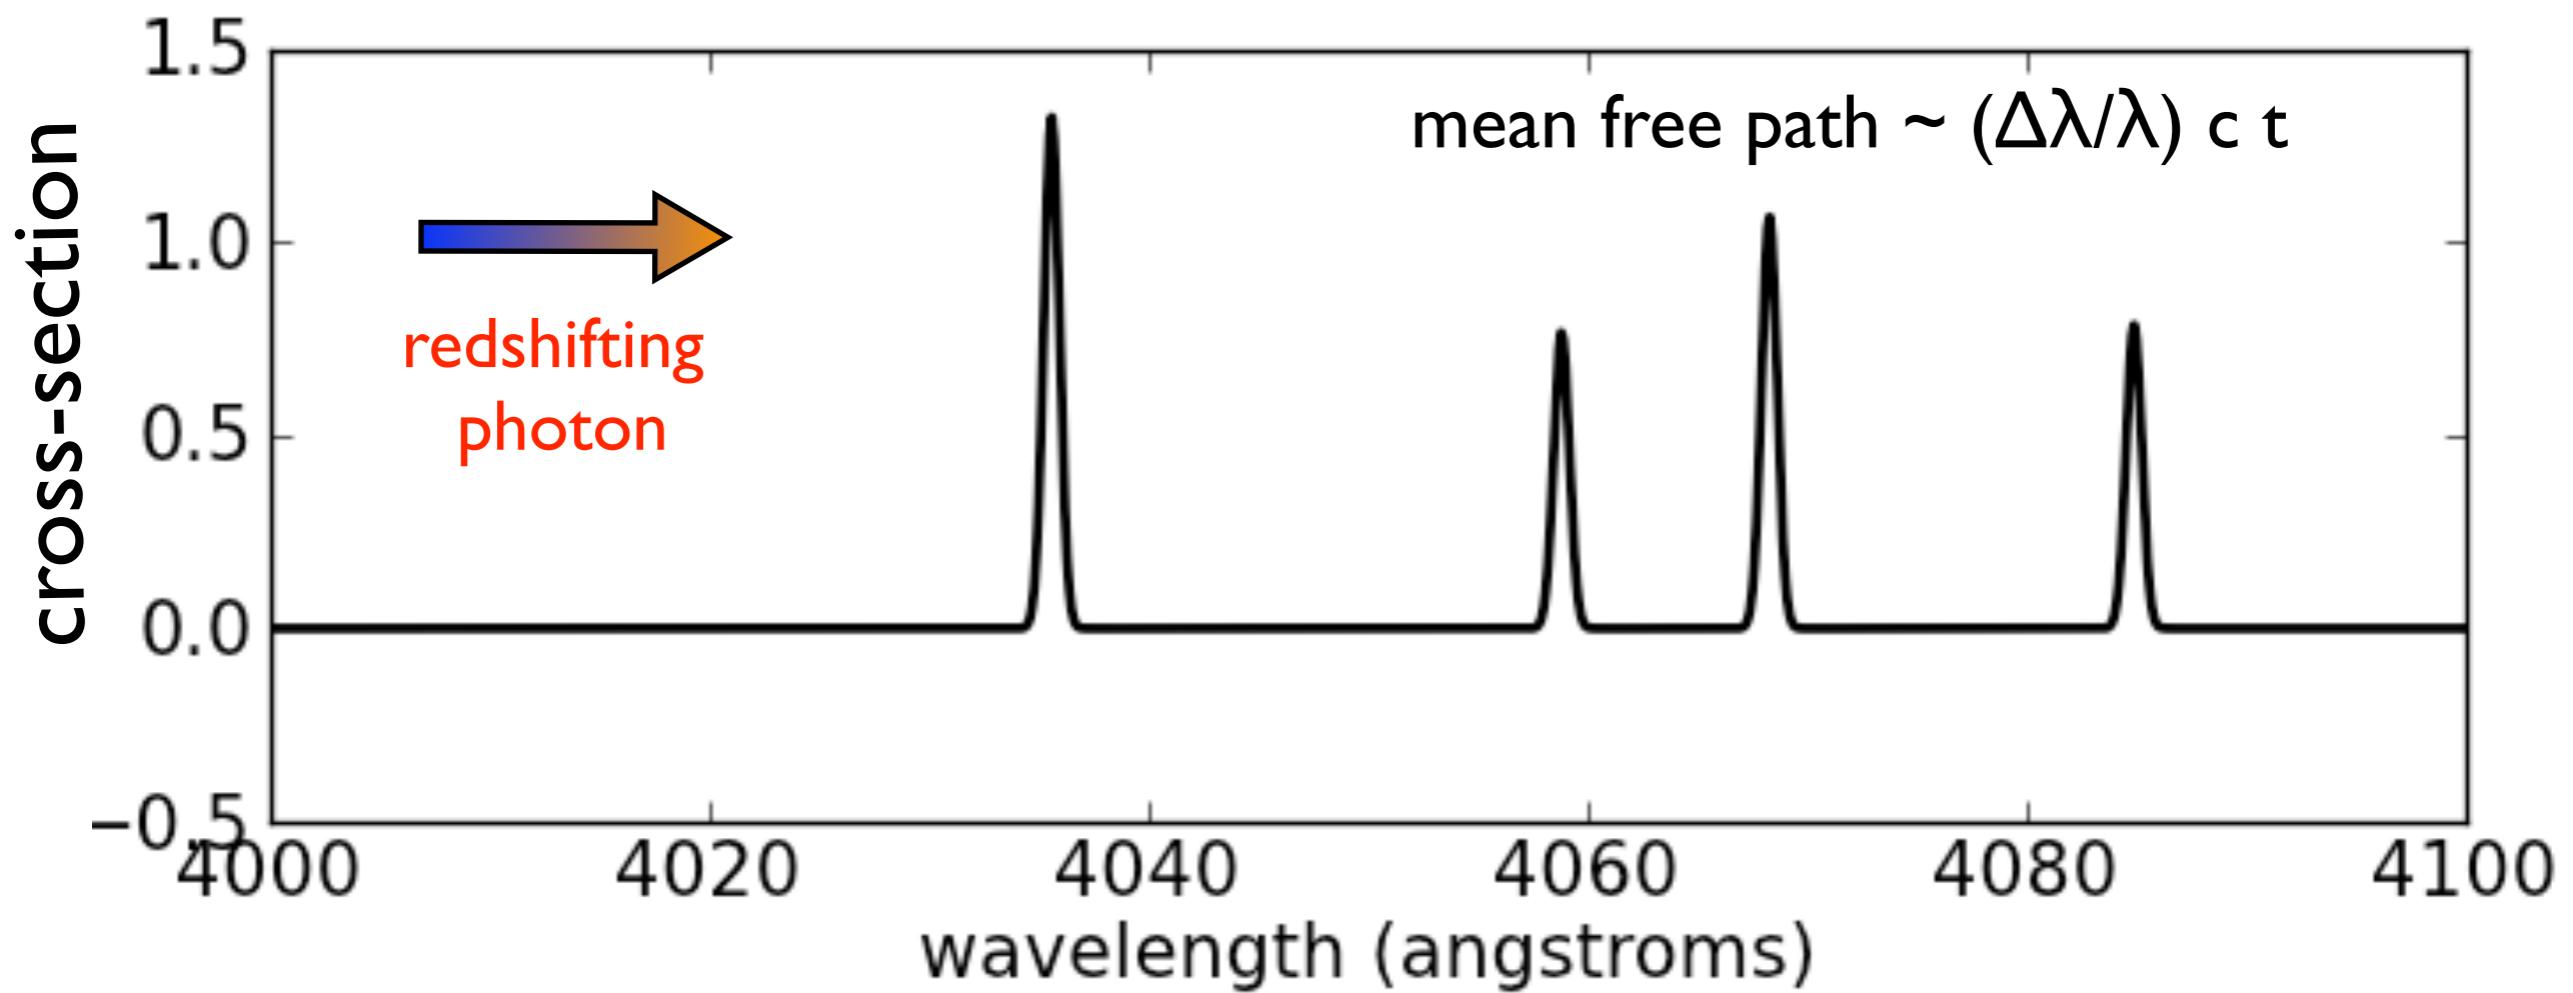

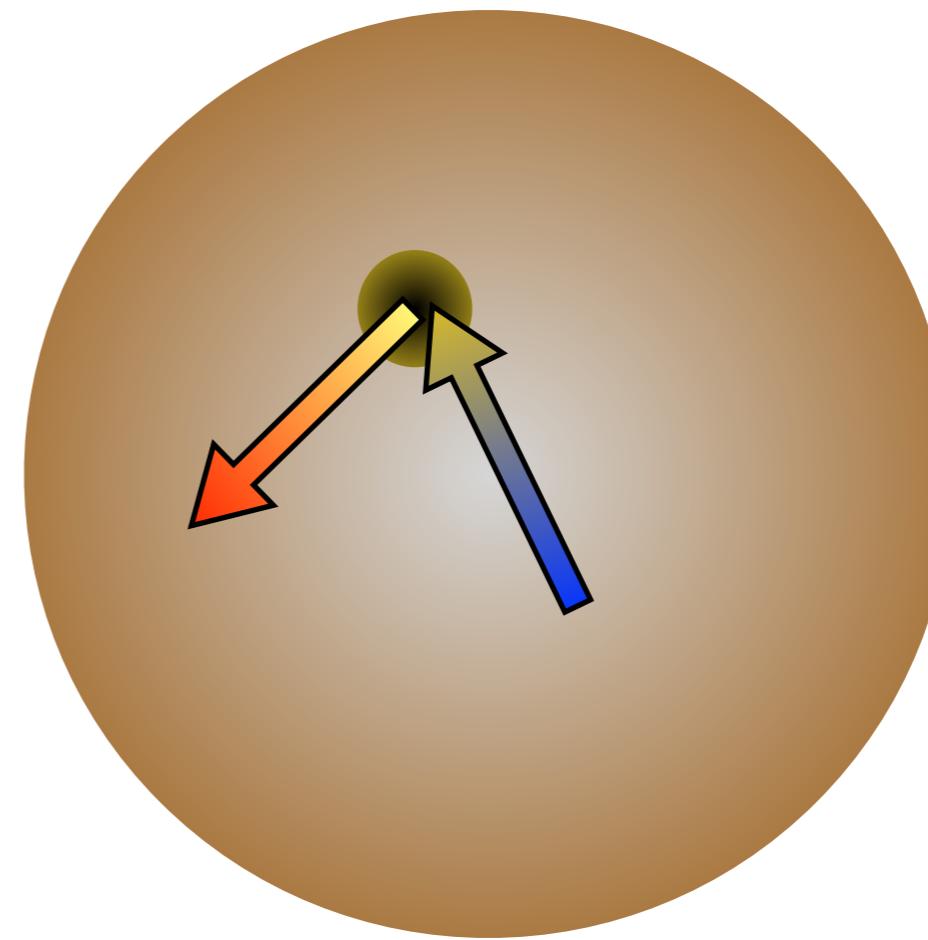

# radioactively powered transients (kilonovae)

# line interactions in an expanding (hubble-like) flow

mean free path set by  
density of lines

# opacity and atomic complexity

f-shell  
(g=14)

# atomic structure and radiative data

limited data available for high Z species

atomic structure modeling  
needed for level/line data

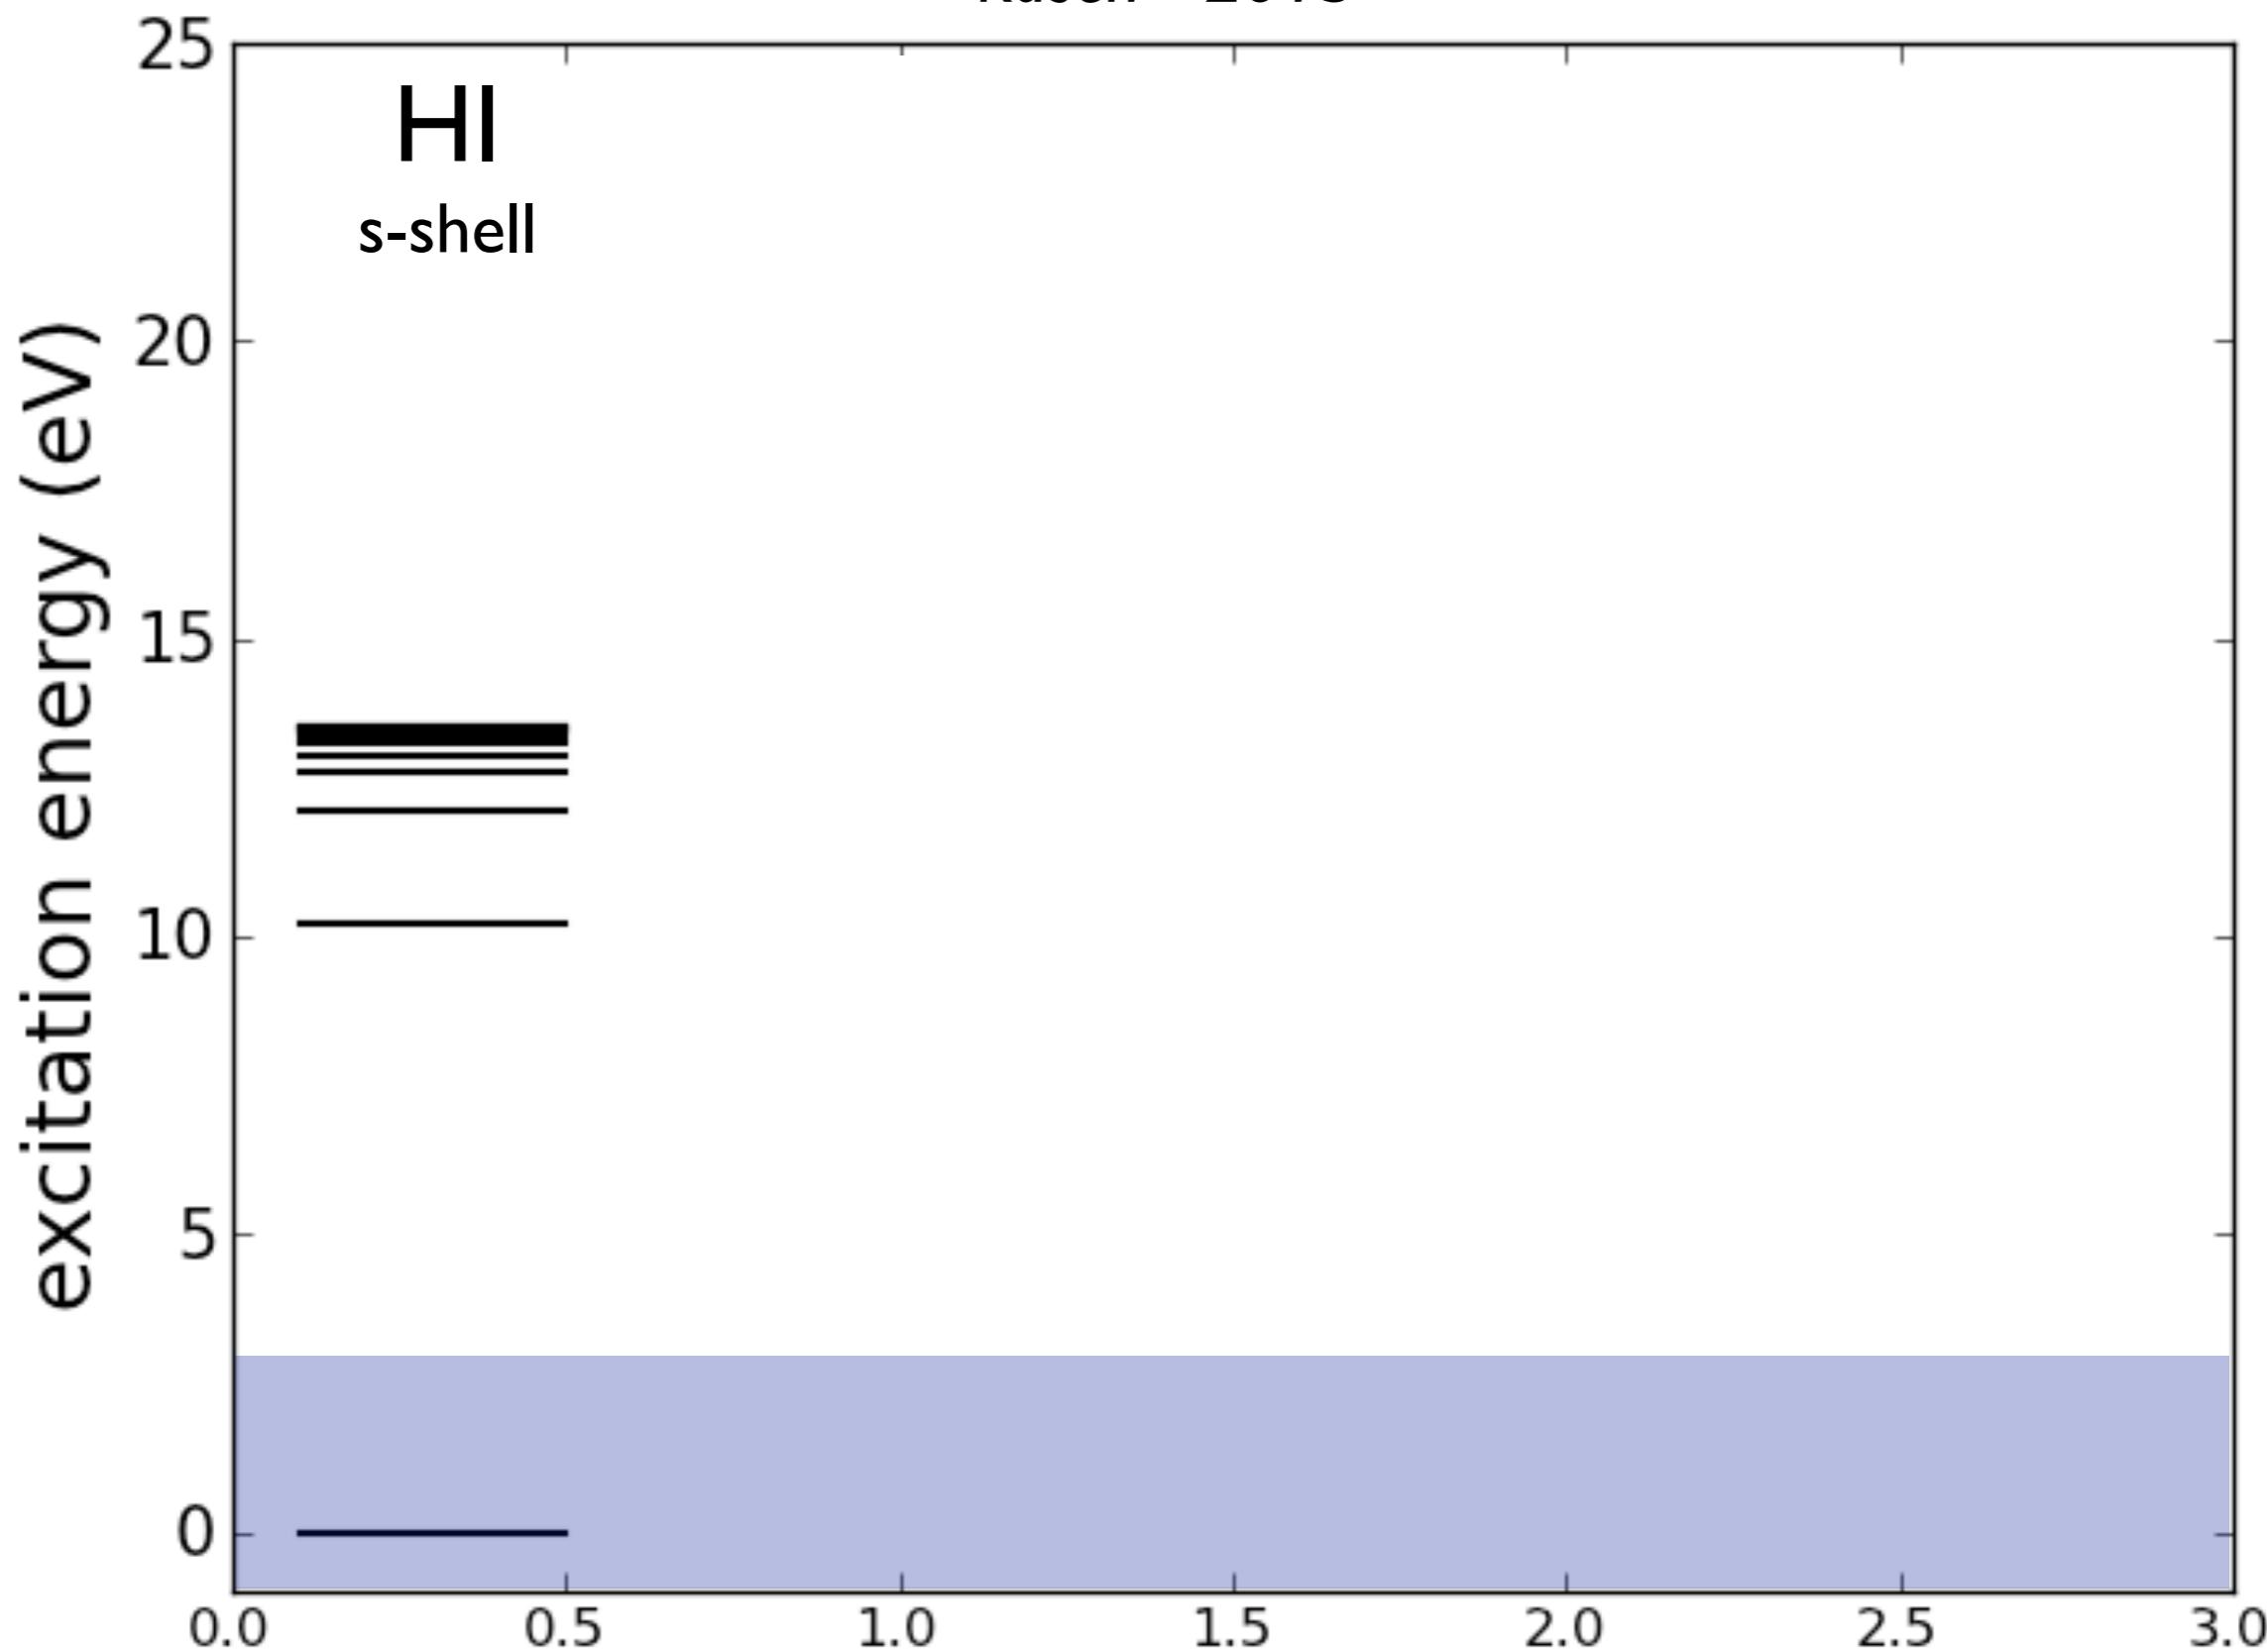

VALD database (Kurucz, MONS)  
(~500,000 lines)  
very incomplete for most ions  $Z > 28$   
no line data for higher ionization states  
almost no data for  $\lambda > 1 \mu\text{m}$

Autostructure calculations  
*kasen, badnell, and barnes (2013)*  
(~40,000,000 lines)  
ab-initio calculations for Nd, Cd, Os,...  
extrapolated to other species

more work underway....

multiple ejecta components  
*disk wind inside dynamical ejecta*

# multiple ejecta components

$t = 100\text{ ms}$  disk wind inside  $10^{-2} M_{\text{Sun}}$  dynamical ejecta

# takeaways

- kilonovae are a direct probe of r-process nucleosynthesis *at the production site*
- modeling kilonova light curves measures ejected mass
- kilonova color is a strong diagnostic of composition
  - lanthanides* ( $A > 130$ ) = *red*
  - lanthanide-free* ( $A < 130$ ) = *blue*
- kilonova spectra carry more detailed information about ejecta velocity and composition
- may be able to untangle multiple components:
  - 1) dynamical, 2) high  $Y_e$  wind, 3) low  $Y_e$  wind
