Multi-messenger approach to astrophysical neutrinos

Multi-messenger approach to astrophysical neutrinos

- ▶ IceCube HE ν 's connected to lower-energy *Fermi* γ 's

Multi-messenger approach to astrophysical neutrinos

- ▶ IceCube HE ν 's connected to lower-energy *Fermi* γ 's
- ▶ Ex: *pp* in star-forming galaxies—both ν 's and γ 's as secondaries

Multi-messenger approach to astrophysical neutrinos

- ▶ IceCube HE ν 's connected to lower-energy *Fermi* γ 's
- ▶ Ex: *pp* in star-forming galaxies—both ν 's and γ 's as secondaries
- ▶ ν and γ spectral index = source spectra index = Γ

Multi-messenger approach to astrophysical neutrinos

- ▶ IceCube HE ν 's connected to lower-energy *Fermi* γ 's
- ▶ Ex: *pp* in star-forming galaxies—both ν 's and γ 's as secondaries
- ▶ ν and γ spectral index = source spectra index = Γ
- ▶ Star-forming galaxies faint but numerous: contribute to isotropic gamma-ray background (IGRB)

Multi-messenger approach to astrophysical neutrinos

Import to understand contributions from unresolved PSs (*e.g.*, blazars) to IGRB to constrain diffuse contributions (*e.g.*, star-forming galaxies)

PSs important for gamma-ray signals of DM

Import to understand contributions from unresolved PSs to gamma-ray background to constrain contributions from dark matter (DM)

The Fermi Large-Area Telescope (LAT)

Fermi (NASA)

The Fermi Gamma-Ray Sky

Data taken from ~August 4, 2008 to December 5, 2013

HEALPIX $n_{\text{side}} = 128$ ($N_{\text{pix}} = 196,608$)

The Fermi Gamma-Ray Sky

Model from ~August 4, 2008 to December 5, 2013 HEALPIX
 $n_{\text{side}} = 128$ ($N_{\text{pix}} = 196,608$)

GeV Excess: Inner Galaxy

(Daylan et al.)

GeV Excess: Spectrum

(from Wei Xue)

GeV Excess: Spectrum

(from Wei Xue)

Pulsars: Spectrum

Millisecond pulsar spectrum similar to excess (from 61 millisecond pulsars and 36 globular clusters)

Astrophysical Scenarios

Can we use the *Fermi* data to differentiate between smooth and unresolved PS emission?

Photon Statistics: DM vs. Point Sources

Photon Statistics: DM vs. Point Sources

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p
- ▶ Generating function:

$$\mathcal{P}^{(p)}(t) = \sum_{k=0}^{\infty} p_k^{(p)} t^k \quad \leftrightarrow \quad p_k^{(p)} = \frac{1}{k!} \left. \frac{d^k \mathcal{P}^{(p)}}{dt^k} \right|_{t=0}$$

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p
- ▶ Generating function:

$$\mathcal{P}^{(p)}(t) = \sum_{k=0}^{\infty} p_k^{(p)} t^k \quad \leftrightarrow \quad p_k^{(p)} = \frac{1}{k!} \left. \frac{d^k \mathcal{P}^{(p)}}{dt^k} \right|_{t=0}$$

- ▶ Point sources:

$$P^{(p)}(t) = \exp \left[\sum_{m=1}^{\infty} x_m^p (t^m - 1) \right], \quad x_m^p = \int dS \frac{dN^{(p)}}{dS} \frac{S^m}{m!} e^{-S}$$

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p
- ▶ Generating function:

$$\mathcal{P}^{(p)}(t) = \sum_{k=0}^{\infty} p_k^{(p)} t^k \quad \leftrightarrow \quad p_k^{(p)} = \frac{1}{k!} \left. \frac{d^k \mathcal{P}^{(p)}}{dt^k} \right|_{t=0}$$

- ▶ Point sources:

$$P^{(p)}(t) = \exp \left[\sum_{m=1}^{\infty} x_m^p (t^m - 1) \right], \quad x_m^p = \int dS \frac{dN^{(p)}}{dS} \frac{S^m}{m!} e^{-S}$$

- ▶ Source-count: $\frac{dN^{(p)}}{dS} = A^p \begin{cases} \left(\frac{S}{S_b}\right)^{-n_1}, & S \geq S_b \\ \left(\frac{S}{S_b}\right)^{-n_2}, & S < S_b \end{cases}$
- ▶ S is average number of photon counts

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p
- ▶ Generating function:

$$\mathcal{P}^{(p)}(t) = \sum_{k=0}^{\infty} p_k^{(p)} t^k \quad \leftrightarrow \quad p_k^{(p)} = \frac{1}{k!} \left. \frac{d^k \mathcal{P}^{(p)}}{dt^k} \right|_{t=0}$$

- ▶ Point sources:

$$P^{(p)}(t) = \exp \left[\sum_{m=1}^{\infty} x_m^p (t^m - 1) \right], \quad x_m^p = \int dS \frac{dN^{(p)}}{dS} \frac{S^m}{m!} e^{-S}$$

- ▶ Source-count: $\frac{dN^{(p)}}{dS} = A^p \begin{cases} \left(\frac{S}{S_b}\right)^{-n_1}, & S \geq S_b \\ \left(\frac{S}{S_b}\right)^{-n_2}, & S < S_b \end{cases}$
- ▶ S is average number of photon counts
- ▶ A^p follow a spatial template

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p
- ▶ Generating function:

$$\mathcal{P}^{(p)}(t) = \sum_{k=0}^{\infty} p_k^{(p)} t^k \quad \leftrightarrow \quad p_k^{(p)} = \frac{1}{k!} \left. \frac{d^k \mathcal{P}^{(p)}}{dt^k} \right|_{t=0}$$

- ▶ Point sources:

$$P^{(p)}(t) = \exp \left[\sum_{m=1}^{\infty} x_m^p (t^m - 1) \right], \quad x_m^p = \int dS \frac{dN^{(p)}}{dS} \frac{S^m}{m!} e^{-S}$$

- ▶ Source-count: $\frac{dN^{(p)}}{dS} = A^p \begin{cases} \left(\frac{S}{S_b}\right)^{-n_1}, & S \geq S_b \\ \left(\frac{S}{S_b}\right)^{-n_2}, & S < S_b \end{cases}$
- ▶ S is average number of photon counts
- ▶ A^p follow a spatial template
- ▶ x_m^p is expected number of m -photon sources

Photon Statistics: Point Sources

- ▶ $p_k^{(p)}$ = probability of finding k photons in pixel p
- ▶ Generating function:

$$\mathcal{P}^{(p)}(t) = \sum_{k=0}^{\infty} p_k^{(p)} t^k \quad \leftrightarrow \quad p_k^{(p)} = \frac{1}{k!} \left. \frac{d^k \mathcal{P}^{(p)}}{dt^k} \right|_{t=0}$$

- ▶ Point sources:

$$P^{(p)}(t) = \exp \left[\sum_{m=1}^{\infty} x_m^p (t^m - 1) \right], \quad x_m^p = \int dS \frac{dN^{(p)}}{dS} \frac{S^m}{m!} e^{-S}$$

- ▶ Source-count: $\frac{dN^{(p)}}{dS} = A^p \begin{cases} \left(\frac{S}{S_b}\right)^{-n_1}, & S \geq S_b \\ \left(\frac{S}{S_b}\right)^{-n_2}, & S < S_b \end{cases}$
- ▶ S is average number of photon counts
- ▶ A^p follow a spatial template
- ▶ x_m^p is expected number of m -photon sources
- ▶ Straightforward modification to include PSF (Malyshev & Hogg)

Non-Poissonian template fit (NPTF)

- ▶ data set d (counts in each pixel $\{n_p\}$)

Non-Poissonian template fit (NPTF)

- ▶ data set d (counts in each pixel $\{n_p\}$)
- ▶ model \mathcal{M} with parameters θ

Non-Poissonian template fit (NPTF)

- ▶ data set d (counts in each pixel $\{n_p\}$)
- ▶ model \mathcal{M} with parameters θ
- ▶ The likelihood function:

$$p(d|\theta, \mathcal{M}) = \prod_{\text{pixels } p} p_{n_p}^{(p)}(\theta)$$

Non-Poissonian template fit (NPTF)

- ▶ data set d (counts in each pixel $\{n_p\}$)
- ▶ model \mathcal{M} with parameters θ
- ▶ The likelihood function:

$$p(d|\theta, \mathcal{M}) = \prod_{\text{pixels } p} p_{n_p}^{(p)}(\theta)$$

The models: templates

Fermi p6 diffuse (1)

Fermi bubbles (1)

Isotropic (1)

NFW (1)

Isotropic PS (4)

NFW PS (4)

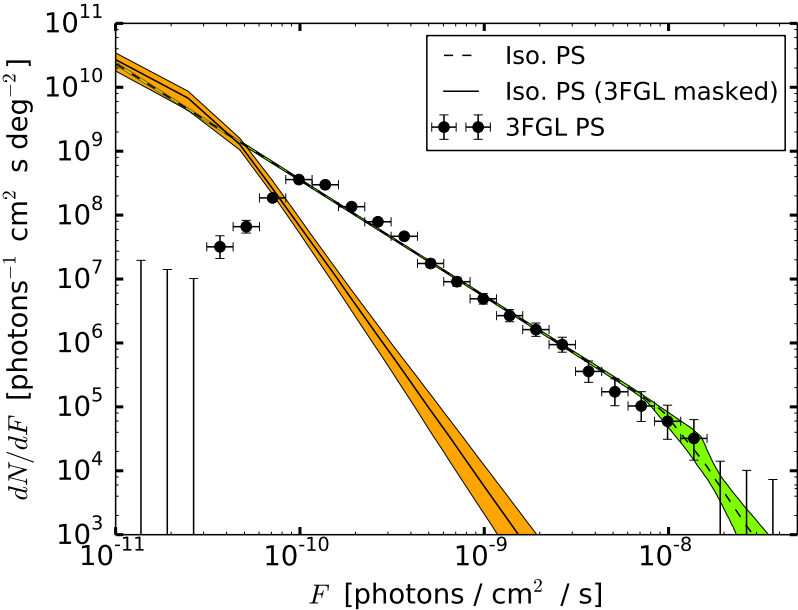

Isotropic point sources

- Region: mask 30° around plane

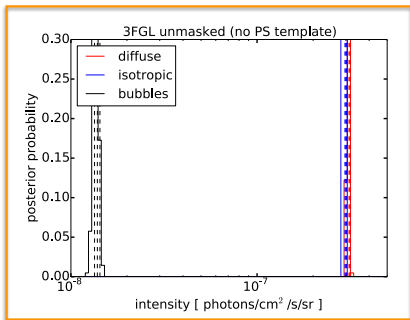

- include diffuse, bubbles, isotropic, and isotropic PS

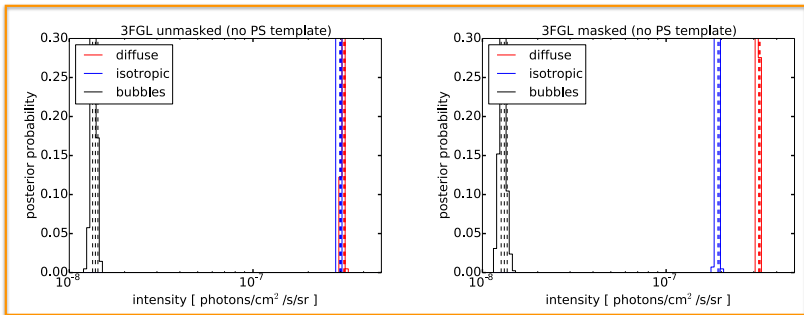

Isotropic point sources: source-count function

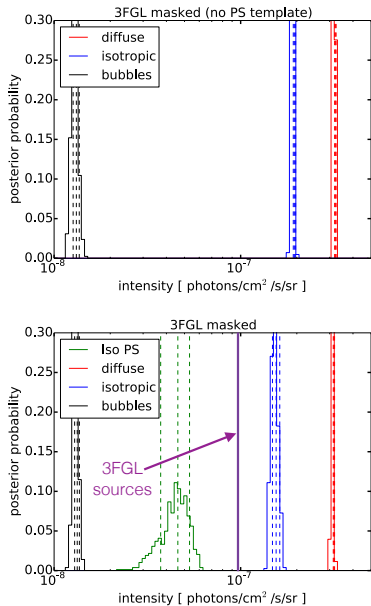

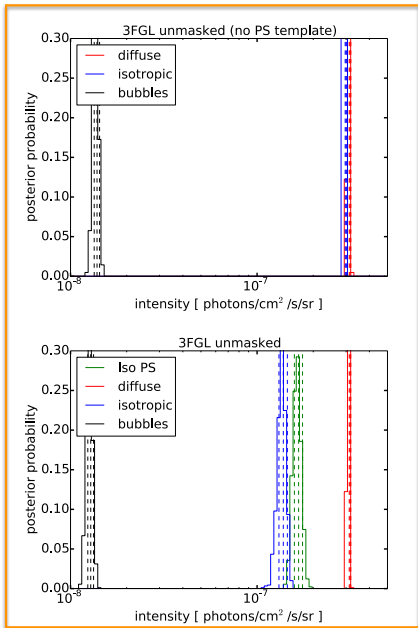

Isotropic point sources: intensities

Isotropic point sources: fluxes

Isotropic point sources: fluxes

Isotropic point sources: fluxes

Region: mask 4° around plane, out to 30°

NFW point sources: source-count function

- For ROI out to 10° , with 4° around plane masked

NFW point sources: source-count function

- Prediction: ~ 200 PS's in inner galaxy (large uncertainties)

NFW point sources: flux fraction

- For ROI out to 10° , with 4° around plane masked

Model comparison

- ▶ NFW DM + NFW PS favored over NFW DM with **Bayes factor** $\sim 10^6$ (very strong evidence)

Model comparison

- ▶ NFW DM + NFW PS favored over NFW DM with **Bayes factor** $\sim 10^6$ (very strong evidence)

Tentative conclusion: GeV excess better fit by point-source emission than smooth (DM) emission

Where are the PSs? $-\log[1 - \text{CDF}(\text{data}; \text{DM model})]$

Summary

- ▶ Many more cross checks of these results

Summary

- ▶ Many more cross checks of these results
- ▶ Validation with Monte-Carlo-generated “fake” data

Summary

- ▶ Many more cross checks of these results
- ▶ Validation with Monte-Carlo-generated “fake” data
- ▶ **Future**: incorporate energy dependence / look at different energy range

Summary

- ▶ Many more cross checks of these results
- ▶ Validation with Monte-Carlo-generated “fake” data
- ▶ **Future**: incorporate energy dependence / look at different energy range
- ▶ **Future**: find the PS's!
